

Reorganizing Photos in CincyMLS

Rapattoni has enhanced the Upload/Manage Pictures page to provide a cleaner interface and improved selection control. The update allows users to quickly rotate or delete individual photos from the main workspace.

To change the order of the photos, hover your mouse over the six dots to the right of the photo. Once the cursor changes to the four arrow icon, use the left mouse button to hold and drag the photo to the desired position.

More information on Rapattoni enhancements can be found [HERE](#).
